

MAKING MODERN LIVING POSSIBLE

Technical brochure

High Pressure Sight Glass

Up to 46 bar MWP

Type SG+

Introduction

Sight glasses are used to indicate:

1. The condition of the refrigerant in the liquid line of the plant.
2. The flow in the oil return line from the oil separator.
3. The moisture content in the refrigerant.

The SGM+ are mainly used to indicate the condition of the refrigerant as well as the liquid level in the receiver or the oil level in the compressor.

The SGN+ are equipped with sensitive indicators that reflects a colour, depending on the moisture content in the refrigerant.

Approvals

Available types

 Solder version	SGM+: Without moisture indicator	 Solder version	SGN+: With HFC moisture indicator
 Flare version		 Flare version	

Features
Type SGM+

- For CFC / HCFC / HFC
- Indicates lack of subcooling
- Indicates refrigerant deficiency
- Indicates liquid level in receiver
- Indicates oil level in compressor
- Flare / solder connection

Type SGN+

- For HFC refrigerants
- Indicates too high water content in the refrigeration system
- Indicates lack of subcooling
- Indicates refrigerant deficiency
- Flare / solder connection

Choice of sight glass

Before choosing a sight glass with moisture indicator, the following should be considered:

- type of refrigerant
- water solubility of refrigerant
- the level on which a danger signal is required.

Be aware that polyester oil for HFC refrigerants, e.g. R134a, R404A, R407C and R410A react with water in a hydrolysis generating acid and alcohol.

The recommended levels of moisture content are usually between 30 and 75 ppm, where hermetic compressors only tolerate very low moisture content, while semi-hermetic and other compressors normally tolerate higher moisture contents in the refrigerant.

The color on the sight glass indicator depends on the moisture content of the refrigerant.

The values under "green/dry" are to be considered as perfect condition meaning full protection against harmful effects from moisture. In other words, the filter drier is working perfectly.

If the green color starts to fade, the color change has begun and the indicator should therefore be watched more carefully. If the color changes to yellow it is a clear signal, that the capacity of the filter drier is exceeded and should be replaced as soon as possible.

Technical brochure
High Pressure Sight Glass – Type SG+
Technical data

Ambient temperature
 $-50^{\circ}\text{C} \rightarrow +80^{\circ}\text{C}$ / $-58^{\circ}\text{F} \rightarrow +175^{\circ}\text{F}$

Max. working pressure
 PS/MWP = 46 bar/667 psi

SGN+ for HFC refrigerants						
	Moisture content ppm = parts per million
